Agilent Ref: 10004108-1 United States Application Serial No. 10/037,757

## LISTING OF THE CLAIMS

- 1. (Currently Amended) An array assembly comprising:
- (a) a plastic base layer;
- (b) a continuous glass layer forward of the base layer;
- (c) an array of polymers having a pattern of features on a front surface of the glass layer; and
- (d) a layer between the base and glass layers that blocks at least 10% of an illuminating light incident on said front surface from reaching said plastic base layer; wherein said array assembly is flexible.
- 2. (Original) An array assembly according to claim 1 wherein the polymers are biopolymers.
- 3. (Previously Presented) An array assembly according to claim 1 wherein said layer between the base and glass layers is opaque.
- 4. (Previously Presented) An array assembly according to claim 1 wherein said layer between the base and glass layer is reflective.
- (Original) An array assembly according to claim 4 wherein the reflective layer comprises a metal.
- 6. (Original) An array assembly according to claim 4 wherein the reflective layer comprises multiple layers of dielectric materials.
- 7. (Previously Presented) An array assembly according to claim 4 wherein the glass layer has a thickness of 40-200 nm.
- 8. (Original) An array assembly according to claim 4 wherein the plastic base layer has a fluorescence of at least ten reference units.

Agilent Ref: 10004108-1 United States Application Serial No. 10/037,757

- 9. (Original) An array assembly according to claim 4 wherein the plastic base layer absorbs at least 10% of light at 532 nm incident on a front surface of the assembly.
- 10. (Original) An array assembly according to claim 1 additionally comprising an identifier on a back surface of the plastic base layer.
- 11. (Cancelled)
- 12. (Original) An array assembly according to claim 1, wherein the assembly is in the form of an elongated web.
- 13. (Original) An array assembly according to claim 12 with multiple arrays disposed along the front surface of the glass layer.
- 14. (Currently Amended) A method of fabricating a flexible array assembly comprising:

providing a plastic base layer with a <u>continuous</u> glass layer bound thereto at a position forward of the plastic base layer and a layer between the base and glass layers that blocks at least 10% of an illuminating light incident on a front surface of said glass layer from reaching said plastic base layer; and

forming an array of polymers having a pattern of features on a front surface of the glass layer.

- 15. (Previously Presented) A method according to claim 14 wherein the layer between the base and glass layers is reflective.
- 16. (Previously Presented) A method of claim 14 wherein the layer between the base and glass layers comprises a metal.
- 17. (Original) A method of claim 16 wherein the layer comprises multiple layers of dielectric materials.

Agilent Ref: 10004108-1 United States Application Serial No. 10/037,757

- 18. (Original) A method according to claim 14 wherein the glass layer has a thickness of 0.40 to 200 nm.
- 19. (Previously Presented) A method according to claim 14 wherein the plastic base layer has a fluorescence of at least ten reference units.
- 20. (Original) A method according to claim 14 additionally comprising forming an identifier on a back surface of the plastic base layer.
- 21. (Cancelled)
- 22. (Original) A method according to claim 14, wherein the assembly is in the form of an elongated web.
- 23. (Original) A method according to claim 14 wherein multiple arrays are formed by depositing drops onto the front surface of the glass layer, which contain the polymers or polymer precursor units.
- 24. (Original) A method according to claim 23 wherein the polymers are polynucleotides or peptides.
- 25. (Cancelled)
- 26. (Previously Presented) A method according to claim 14 wherein the layer between the base and glass layers is opaque.
